Del Basso Smallgoods

Since 1957, Del Basso Smallgoods have been one of Western Australia's leading smallgoods companies, providing an extensive range of Italian, Continental and Colonial smallgoods state-wide. As a Western Australian owned and operated family business, Del Basso Smallgoods continues to supply major supermarket chains, continental deli's and many lunch bars, cafes, and restaurants across Perth.

Del Basso Smallgoods began as a single operation with Renato Del Basso and Barbara Del Basso running the business. Now, over 60 years later, it is still common to see Renato and Barbara are regularly involved in the operations of the business, along with their sons, John and Steve, and over 30 other staff focusing on producing high quality goods.

In 1996, Del Basso Smallgoods decided to upgrade their financial software and invest in Triumph ERP as their existing software lacked the operational capability needed for their growing business.

"With the growth of our business, switching to Triumph assisted us with our high volume of invoicing, allowing us to conveniently manage our stock and orders without complications." said Steve Del Basso, Sales & Marketing Manager of Del Basso Smallgoods.

Del Basso uses Triumph software to facilitate the sales and operations of the business. Currently, Del Basso use the base financial modules, but are looking to expand to further modules to enhance the automation of their business.

"We have been with Triumph for over 23 years, during which time we have had the ability to expand and evolve our capabilities due to Triumph. Having the Inventory module and the Creditors and Debtors modules, we have been able to conduct all our invoicing operations through the Triumph system without any complications. Our current modules allow us to keep up to date on our stock and business performance."

"With the planning of future growth for Del Basso Smallgoods, Triumph will allow for us to transition seamlessly into a more unified business through the addition of modules such as the Advanced Sales Orders Module and the B2B E-Commerce module."

"Triumph ERP is a cost effective alternative within the market which will grow with our business, making Triumph our preferred choice when it comes to business system software."
